As Crane hook up and down lifting trolley horizontal development and crane long traveling longitudinal movement. The main impetus of hoisting mechanism is from motor. It transmits power to the rapid shaft end of reducer by apparatus coupling pay shaft and break wheel coupling. At that point through reducer to decrease the high transformation of engine to the required unrest and yield by low speed shaft of reducer. The ring apparatus of drum transmit main thrust to drum set then through wire ropes and pulleys drive crane attach and down in order to complete the lifting of the heavy object up and down.
